

STANDING NOTE — Open Threads, Milestones 1–3

Swiss Market Forecasting Project | Not a milestone deliverable — a persistent record for whoever picks this project up next, so caveats disclosed once don't get forgotten.

OPEN THREADS

Item	Description	Status
UBSG post-merger sample size	FX-beta shift, separate-vs-pooled LR decision, and the skew-t mechanism all partly rest on ~ 780 post-merger observations (~ 2 years). Directionally consistent every time it's been checked, never independently large-sample-confirmed. Revisit as more post-merger history accumulates.	Directionally consistent, not yet large-sample-confirmed
Event-clustering methodology	The SVB/Credit Suisse refit-8 narrative was built and killed (M2) via a simple max-of-23 null; a proper event-study design (windows defined independently of the outcome) was never built.	Deferred, not resolved
Refit-10 joint ν/λ effect	One of the three skew-t coverage improvements (M3) is a joint effect — ν dropped 2.1 points alongside λ , not isolated to skewness. What drove that ν shift specifically was never investigated.	Flagged, not decomposed
ML challenger 99% calibration	Fails Kupiec at 99% by a margin that doesn't survive multiple-testing correction either. Could resolve with more data or with feature/hyperparameter work not yet attempted (current model is default-adjacent).	Monitor, not settled
Skew-t BIC near-tie	AIC and the walk-forward backtest both favor skew-t; BIC is essentially neutral on the extra parameter.	Not a unanimous result across every metric — worth remembering
Process: the mkdir brace-expansion bug recurred once already	Caught and “fixed” at kickoff, but the fix wasn't persisted anywhere durable, and it reappeared after a mid-project environment reset. <code>setup_scaffold.sh</code> now exists for this specific failure mode.	A fix isn't real until it survives a reset, not just a review

Companion to: `milestone1_memo.pdf`, `milestone2_memo.pdf`, `milestone3_memo.pdf`, and the three notebooks. None of the six items above should be read as closed by any statement in those documents.
